#### **OVERVIEW**

#### Legislation

What is the primary law governing trademarks in your jurisdiction?

The Trade Marks Act 1999 ( www.ipindia.nic.in/writereaddata/Portal/IPOAct/1\_43\_1\_trade-marks-act.pdf ) is the primary statute along with the corresponding Trade Marks Rules 2017, which govern protection and enforcement of trademarks in India.

Law stated - 01 October 2022

#### Agencies

Which agency is responsible for the grant and registration of pharmaceutical trademarks?

The Trade Marks Registry, with a head office at Mumbai and branch offices at Ahmedabad, Chennai, Delhi and Kolkata, is the responsible office for the grant and registration of all trademarks, including pharmaceutical trademarks.

Law stated - 01 October 2022

#### Regulators

What are the relevant national and international regulatory bodies and requirements that need to be considered when clearing a pharmaceutical trademark?

The Ministry of Health and Family Welfare and the Ministry of Chemicals and Fertilisers are the government bodies that regulate the healthcare and pharmaceutical sectors. The agencies primarily responsible for regulating the import, manufacture, distribution and sale of drugs in India include:

- the Central Drug Standard Control Organisation;
- the State Drug Standard Control Organisations; and
- the Drug Controller General of India, established under the Drugs and Cosmetics Act 1940 (https://cdsco.gov.in/ opencms/export/sites/CDSCO\_WEB/Pdf-documents/ acts\_rules/2016DrugsandCosmeticsAct1940Rules1945.pdf).

Furthermore, the Drugs and Cosmetics Rules 1945 framed under the Drugs and Cosmetics Act set (among other things) the prescribed standards and procedural guidelines for its operation.

The pharmaceutical industry notably accounts for the most trademark registration applications of any sector in India.

Indian trademark law prohibits registration of marks that are descriptive in nature or devoid of distinctiveness, except where the mark has acquired distinctiveness or secondary significance on account of its use, publicity and popularity. However, a feature peculiar to pharmaceutical trademarks is that these marks are often derived from the name of the concerned ailment, organ or chemical compound contained in the relevant drug, and may thus lack inherent distinctiveness. Therefore, the deciding factor is the brand owner's evidence of a secondary meaning.

Section 13 of the Trademarks Act 1999 prohibits registration of the names of chemical elements, compounds and international non-proprietary names (INNs) (which have been declared by the World Health Organization and notified by the registrar of trademarks in 2012), or which are deceptively similar to such names. If an INN is erroneously registered as a trademark, it is liable to be cancelled. Since INNs are generic names of active pharmaceutical ingredients, they can

be used by all drug manufacturers. The existence of a large number of trademarks similar to INNs highlights the need for greater scrutiny of pharmaceutical trademark applications.

Law stated - 01 October 2022

#### Non-traditional trademarks

What non-traditional trademarks are available in your jurisdiction and how are they registered?

Notable non-conventional marks in the pharmaceutical field include shape marks, colour marks and holograms. Certain shapes and sounds have already been registered as pharmaceutical trademarks in India. Although the concept of sound marks is not new, they have been granted explicit recognition under the Trademarks Rules 2017 (as notified on 6 March 2017); as such, businesses would be wise to seek exclusivity for their musical or other auditory branding and marketing methods in order to appeal to consumers in today's highly disruptive market. One such sound mark registered in India for pharmaceuticals is the sound of 'HI' 'SA' 'MI' 'TSU' sung over certain musical notations and applied on a 'proposed to be used' basis by Hisamitsu Pharmaceutical Co Inc of Japan. The protection of colour combinations is recognised in India but the possibility of claiming exclusivity over a single colour remains a grey area.

Law stated - 01 October 2022

#### **Cannabis-derived products**

Does your jurisdiction allow the registration of cannabis-derived products?

The use of substances, such as cannabis, canabidiol and tetrahydrocannabinol, which are chemical compounds that naturally occur in the resin of the cannabis plant, is not allowed in India. The Narcotic Drugs and Psychotropic Substances (NDPS) Act, 1985 prohibits a person to produce, manufacture, cultivate, possess, sell, purchase, transport, store or consume any narcotic drug that includes cannabis and substances procured therefrom. However, cannabis cultivation and sale are allowed under the NDPS Act strictly for medical, scientific, horticulture and industrial purposes, provided the state governments issue a licence to that effect. The trademark registration is also allowed for cannabis derived products.

Law stated - 01 October 2022

#### PARALLEL IMPORTS

#### Regulation

What are the rules governing parallel imports of pharmaceutical goods?

Where a person lawfully acquires goods bearing a registered trademark, the sale of or other dealings in those goods by that person or its agent will not amount to infringement in India. The concept of parallel imports is inextricably linked to the principle of exhaustion of rights. In respect of trademarks, India follows the principle of international exhaustion of rights as observed by the Division Bench of the Delhi High Court in Kapil Wadhwa v Samsung Electronics . The appeal against the judgment of the Division Bench is currently pending before Supreme Court of India, which will determine the exact position on parallel imports.

Law stated - 01 October 2022

#### Strategies against parallel imports

#### What strategies are available to police and enforce against parallel imports?

For the import of any drug, an import licence is required from the Drug Controller General of India, which is valid for three years. No drug that is prohibited in the country of origin can be imported into India, except for the purpose of examination, tests or analysis. The import of a drug is prohibited where it:

- is not of standard quality;
- is misbranded, adulterated or spurious;
- may involve any risk to human beings or animals; or
- does not hold the claimed therapeutic value.

The enforcement agencies such as the police may not be appropriate authority to enforce rights against parallel imports. The brand owners are advised to take a civil route by filing suit for infringement and passing-off. Parallel importation may sometimes be followed by repackaging. At this stage, section 30(4) of the Trademarks Act comes into effect. This section mandates that a brand owner may oppose further dealings in the goods where the condition of the goods has been changed or impaired after having been put on the market. Therefore, if the repackaging of pharmaceuticals causes any material change or impairment, the brand owner may object to such repackaging; otherwise, the repackaging must duly conform to the relevant packaging and labelling requirements. The impairment of goods need not only be physical to preclude the immunity or exemption to the defendants from infringement under the 'First Sale' doctrine. Even differences in services and warranties, advertising and promotional efforts, packaging, quality control, pricing and presentation would amount to impairment of the products, under section 30(4) of the Act.

Law stated - 01 October 2022

#### ANTI-COUNTERFEITING AND ENFORCEMENT

#### Types of proceedings

What types of legal or administrative proceedings are available to enforce against infringing products?

A brand owner can initiate both civil and criminal proceedings against the infringement of a registered trademark. If the mark is not registered in India, a civil action for the tort of passing-off can be initiated, provided that the mark has acquired substantial goodwill and reputation in the relevant markets and actual or potential injury will or is likely to be caused to the trademark owner as a result of the misrepresentation.

India has a robust border security and enforcement system under the Customs Act 1962, whereby rights holders can enforce their intellectual property (IP) rights at the Indian border under the Intellectual Property Rights (Imported Goods) Enforcement Rules 2007.

Law stated - 01 October 2022

#### Remedies

What are the available remedies for infringement?

Through a civil action, the rights holder can obtain remedies in the form of an injunction, seizure and destruction of

infringing stock and damages (as the remedy of damages is not available under a criminal action).

The available remedies under the criminal route against falsification and false application of trademarks (including counterfeiting) are imprisonment for a term of six months to three years and a fine of 50,000 rupees to 200,000 rupees. These offences are cognisable under Indian criminal law procedure, which enables a police officer of a rank not below the deputy superintendent of police to search and seize counterfeit stocks and arrest accused persons in possession of such stocks without a warrant or prior court permission. However, the officer must obtain an opinion from the registrar of trademarks before any action is taken on a complaint filed by the rights holder.

In respect of pharmaceutical trademarks, specific actions are also available under the Drugs and Cosmetics Act, read with the Drugs and Cosmetics Rules. As one of the main objectives of this legislation is to ensure that publicly available drugs are safe and efficacious, it also stipulates criminal penalties for offences relating to the import, manufacture and sale of spurious drugs. According to sections 9B and 17B of the Drugs and Cosmetics Act, in relation to the import and the manufacture, sale and distribution of drugs respectively, a 'spurious drug' includes counterfeit products and the 2008 amendments have significantly upped the ante, making the penal framework much stricter. The import of spurious drugs entails a punishment of imprisonment for up to three years and a fine of up to 5,000 rupees. Further, section 11(2) of the Drugs and Cosmetics Act provides that the commissioner of Customs or an authorised officer may detain any imported package suspected to contain any drug whose import is prohibited.

The manufacture, sale or distribution of any spurious drug that is likely to cause a person's death or grievous harm on consumption will entail imprisonment of 10 years to life, along with a fine of no less than the greater of 1 million rupees or three times the value of the drugs confiscated. In all other cases involving spurious drugs, the penalty will be imprisonment of seven years to life and a fine of no less than the greater of 300,000 rupees or three times the value of the drugs confiscated.

Law stated - 01 October 2022

#### **Border enforcement**

What border enforcement measures are available to halt the import and export of infringing goods?

India has a robust border security and enforcement system under the Customs Act 1962, whereby rights holders can enforce their IP rights at the Indian border under the Intellectual Property Rights (Imported Goods) Enforcement Rules 2007. In this regard, the relevant IP rights must be validly registered. The term of customs protection is five years from recordation of the rights with the customs authorities or until expiry of the relevant IP rights registration, whichever is earlier. These rules are specifically designed to stop the import of infringing goods, but custom officials have wide powers to even stop the export of infringing goods if the knowledge of such export of infringing goods are brought to the attention of relevant officials.

Law stated - 01 October 2022

#### **Online pharmacy regulation**

What rules are in place to govern online pharmacies?

The Drug Controller issued a notification stating that the online sale of medicines must conform to the requirements laid down in the Drugs and Cosmetics Act. The chief area of concern has been the online sale of prescription drugs. The rules regarding the operation of online e-pharmacies are yet to be finalised by the government and various e-pharmacies currently operate in the country, but those that do not meet the requirements of the Drugs and Cosmetics Rules – including those relating to sales from licensed premises and maintaining necessary records – are not

permitted. There have also been deliberations regarding requirements for scanned and electronic copies of prescriptions in the context of prescription drugs sold through e-pharmacies. The Drugs and Cosmetics Rules mandate that a prescription be written and signed by the prescriber with his or her usual signature and usual date; further, the Pharmacy Practice Regulations 2015 define 'prescription' as a written or electronic direction from a registered medical practitioner or other properly licensed practitioners to a pharmacist to compound and dispense a specific type and quantity of preparation or pre-fabricated drug to a patient. Thus, electronic and scanned copies of prescriptions are acceptable. The government is planning to roll out the e-pharmacy project soon, having released the draft rules in August 2018. Under these rules, no person must sell, stock, exhibit or offer for sale drugs through the e-pharmacy portal unless registered by the central licensing authority. Specific conditions need to be fulfilled by the e-pharmacy applicant before a registration is granted, which will be valid for a three-year period and is renewable. E-pharmacies must also retain prescriptions and verify details of patients and doctors. The rise of e-pharmacies has led to increased online sales of counterfeit drugs. In the case of any infringement or passing off, the rights holder not only has recourse to remedies against the seller or manufacturer of the counterfeit drugs, but can also initiate an action against the epharmacy under internet intermediary liability. Notice may be sent to such e-pharmacies to take down content relating to infringing products, which will fulfil the requirement of 'actual knowledge' on the part of the intermediary. In the case of non-compliance by the e-pharmacy, a cause of action based on internet intermediary liability is available.

Law stated - 01 October 2022

#### **Recent cases**

What are the most notable recent cases regarding the enforcement of pharmaceutical marks?

In the case of Intas Pharmaceuticals Private Limited v Intra Life Private Limited and Ors, the Delhi High Court granted a permanent injunction against the defendants, restraining them from using the plaintiff's registered trademark, Looz. The case was brought against three defendants, the first of which settled the matter amicably with the plaintiff. This defendant acknowledged the vested and proprietary rights of the plaintiff in the mark and its variants, including priority rights in adoption, usage in trade and the validity and subsistence of the trademark registrations. The court approved the terms of the settlement and ordered that, since the matter was settled with the first defendant in the early stages of the case, the plaintiff was entitled to a refund of 50 per cent of the court fees it had paid.

However, the other two defendants neither appeared in court nor were represented, even though counsel had briefly appeared on their behalf the day before, saying that the defendants would be applying to set aside an existing interim injunction made in their absence and applying for a further adjournment. Counsel had stated that the basis for discharging the interim injunction was that the defendants were willing to settle the matter. The case against the second and third defendants proceeded in their absence. The court held that the defendants chose to avoid the proceedings despite good service of notices to appear. Further, the defendants submitted no material or justification for the use of the infringing mark on their products.

These defendants were using the mark, Loozout, on their pharmaceutical products, which was deceptively similar to the plaintiff's trademark, Looz. The defendants, their assignees, agents and all others working on their behalf were permanently stopped from manufacturing, selling, offering for sale, advertising and promoting the products using the mark, Loozout, or the mark, Looz, with any other prefix or suffix. The defendants were further restrained from manufacturing or selling any product under any other mark identical or deceptively similar to the registered mark of the plaintiff. In addition, the court ordered the defendants to pay costs to the plaintiff of 200,00 rupees.

It is of interest that under the Trade Marks Act, 1999, section 103, trademark infringement is punishable with imprisonment for not less than six months but no longer than three years and a fine of not less than 50,000 rupees but no more than 200,000 rupees. The court may, for special reasons that must be set out in its judgment, impose a sentence of imprisonment of less than six months and a fine of less than 50,000 rupees. Here, the court ordered costs

against the absent defendants that equalled the maximum fine a criminal court could have imposed. The court gave no indication that the plaintiff had submitted an estimated level of costs, let alone a detailed summary. The court merely referenced a claim for costs set out in the claim. It appears that the court, in awarding costs, took the maximum criminal penalty as a guide. Whether that approach would survive an appeal is the interesting aspect of a short judgment, but the court clearly intended the order to reflect the seriousness of infringing pharmaceutical trademarks and the possible repercussions on the health and safety of consumers.

In the case of Sun Pharmaceutical Laboratories Ltd v Hetero Healthcare Ltd. and Anr FAO (COMM) 96/2022, the Delhi High Court decided the issue of INNs as trademarks. The court dismissed the appeal filed by Sun Pharmaceutical Laboratories Ltd. (Sun Pharma) against the Commercial Court's order refusing to grant an injunction in its favour in a suit for infringement and passing off against the Respondent Hetero Healthcare Ltd.(Hetero). The issue arose between Sun Pharma and Hetero, which were using the marks LETROZ ad LETERO respectively for a drug, the active ingredient for which is 'LETERZOLE'.

Before the Commercial Court, Sun Pharma contended that it was one of the largest generic medicine manufacturing pharmaceutical companies in the world and that it had been manufacturing a generic drug for second line treatment of advanced breast cancer containing the active ingredient 'LETROZOLE' under the trademark 'LETROZ', registered in Class 5 since 1 September 2001. In 2017, it gathered that the mark 'LETERO' was being used by the respondent HETERO. It relied on its registration to claim that it has the statutory right to exclusively use its trademark 'LETROZ' and that it was entitled to an order restraining HETERO from using the trademark 'LETERO', because it was deceptively similar to its registered trademark 'LETROZ'.

HETERO, in its defence, argued that its mark 'LETROZ' was derived from the word 'LETROZOLE', which is an international non-proprietary name (INN) of a salt; therefore, Sun Pharma was not entitled to claim monopoly over the said word. HETERO further contended that it is common practice in the pharmaceutical industry to use trademarks derived from the active pharmaceutical ingredient (API). It further argued that the mark 'LETERO' is a registered trademark of HETERO and is coined by combining the first two letters of the salt 'LETROZOLE' with the last four letters of HETERO, that is, 'TERO'. It also alleged acquiescence on Sun Pharma's part saying they had been aware of HETERO's use of the mark LETERO since 2007.

After going through these contentions, the learned Commercial Court held that there was no deceptive similarity between the competing marks that could confuse a doctor or a chemist and that it was beyond understanding as to how the plaintiff could stop the defendant from using first two alphabets when they themselves were using all the six letters LETEROZ of the generic name, namely, LETEROZOLE. Therefore, the application for injunction filed by Sun Pharma was dismissed. Sun Pharma filed an appeal against the decision.

The Court held that the appellant could not be allowed to monopolise the INN 'LETROZOLE'. One of the points that the Court emphasised was that, for the treatment of an ailment as serious as breast cancer, it was difficult to accept that a medical practitioner prescribing the drugs for its treatment would be confused because the initial three letters of the marks, which are derived from the INN, are the same.

The decision of the court is in line with the globally accepted principles around INNs. Registration and enforcement of such marks, which are derived from INNs and are closely similar, thereto would create confusion in drug nomenclature and would indeed amount to allowing monopoly over generic names for drugs that should ideally be available for use by all.

Law stated - 01 October 2022

#### ADVERTISING

**Regulatory bodies** 

Which bodies are responsible for oversight of pharmaceutical advertising in your jurisdiction (and what are their powers)?

The authorities under the Drugs and Cosmetics Act and the Drugs and Magic Remedies (Objectionable Advertisement) Act and the Advertising Standards Council of India along with the Indian courts are the responsible bodies for enforcing rights against false pharmaceutical advertising and the violation may attract seizure, imprisonment and fine.

Law stated - 01 October 2022

#### **Advertising rules**

#### What specific rules are in place regarding the advertising of pharmaceutical products?

Under the Drugs and Cosmetics Act, a drug will be deemed to be misbranded if it is not labelled in the prescribed manner or if the label contains anything misleading. For instance, any misleading statement with respect to the name, composition, strength or other elements of the drug connotes a misbranded drug.

The Drugs and Magic Remedies (Objectionable Advertisement) Act 1954, which applies to a specified category of drugs limited to a specified list of disorders, diseases and conditions, prohibits advertisements including the display of labels in connection with diagnoses, cures, mitigation, treatments or prevention; with respect to drugs in general, it prohibits false or misleading claims in advertisements. Advertisements for magic remedies are also prohibited under the act.

The Advertising Standards Council of India (ASCI) is a non-governmental organisation whose main objectives include developing self-regulation guidelines for advertising content in order to ensure that the claims made through advertisements are true, thereby preventing the spread of dishonest and misleading content among consumers. On 20 January 2017, the Ministry of Ayurveda, Yoga and Naturopathy, Unani, Siddha and Homoeopathy (AYUSH) signed a memorandum of understanding with the ASCI to undertake the monitoring of misleading AYUSH-related advertisements appearing in print and TV media, and to bring improper advertisements to the attention of the state regulatory authorities for necessary action.

Further, the Uniform Code for Pharmaceuticals Marketing Practices (which is a voluntary code) states that the promotion of any drug must be consistent with the terms of that drug's approval for sale or supply and that such promotion cannot be undertaken before the procurement of such approval or a drug licence.

Law stated - 01 October 2022

#### **GENERIC SUBSTITUTION**

#### Legality

Is generic substitution permitted in your jurisdiction?

For the generic pharmaceutical market, Indian patent law includes a provision to apply for a compulsory licence. One of the grounds on which such an application may be submitted is the non-availability of the patented invention at a reasonably affordable price to the public. Therefore, generic versions of patented pharmaceuticals can be manufactured under such a licence.

To ensure safety and efficacy of generic drugs, the Drugs and Cosmetics (Ninth Amendment) Rules 2017 made bioequivalency testing mandatory in relation to certain classes of generic drugs (including drugs that are not new drugs), even where the manufacturer applying for a licence relies on the past research data submitted by original

manufacturing pharmaceutical companies.

#### Regulations

#### Which regulations govern generic substitution by pharmacists of brand-name drugs?

In its endeavour to supply medicines across India at affordable prices, the government has championed the establishment of jan aushadis under the Pradhan Mantri Bhartiya Jan Aushadhi Pariyojana . Jan aushadis are pharmacies that sell only generic name medicines at affordable prices. The hindrance to this scheme is in the form of Rule 65(11A) of the Drugs and Cosmetics Rules 1945, which does not allow pharmacies (including the jan aushadis ) to substitute medicines while dispensing prescription drugs containing substances specified in Schedule H or Schedule H1 or X. To facilitate the smooth implementation of this scheme, in its 81st meeting on 29 November 2018, the Drugs Technical Advisory Board considered this issue and agreed to amend Rule 65(11A), thereby allowing jan aushadis to substitute medicines with generic versions of drugs specified in Schedule H, H1 or X.

The board has also recommended that the Drugs and Cosmetics Rules be amended with the introduction of a provision regarding the conspicuous display of a sign carrying the phrase 'generic medicines are also available', in addition to having a separate shelf or rack for generic medicines in retail pharmacies. The board further recommended that a definition be included for 'generic medicine' in the Drugs and Cosmetic Rules, since it is currently not defined.

Law stated - 01 October 2022

#### **UPDATE AND TRENDS**

#### Key developments and future prospects

What were the key judicial, legislative, regulatory and policy developments of the past year in relation to the protection and enforcement of pharmaceutical trademarks? What are the prospects for future developments?

On the judicial enforcement side, the rules of comparison for pharmaceutical trademarks have been stricter than those in other categories of products. The courts have frequently held that when pharmaceutical products are concerned, confusion may result in harmful consequences to the health of consumers. Therefore, a stricter approach has been applied by Indian courts whenever there is a question of similarity between two pharmaceutical brands.

In India, the regulatory provisions for manufacture and sale of medicines are appropriately covered. However, these do not define the regulations for online sale and monitoring of pharmaceutical medicines clearly. The Draft Rules governing such sales have already been published and it is expected that the government will soon implement the rules, which will be helpful in providing the much required definitive regulatory framework to make sure proper functioning of the e-pharmacies in India.
